Pyae Sone Shin Thant

Platform / DevOps Engineer · AWS · Terraform · Kubernetes
Bangkok, Thailand | +66 630 365 074 | me@psstee.me | linkedin.com/in/pssteee | github.com/Pssttt | psstee.me

Education

King Mongkut's University of Technology Thonburi (KMUTT) — Bangkok, Thailand
B.Sc. in Computer Science, 3rd year — *Expected Jul 2028*

Yangon Technological University (YTU) — Yangon, Myanmar
Petroleum Engineering, 5 years completed; studies ended by the 2021 military coup — *2015 – 2021*

Experience

Platform / DevOps Intern — Mar 2026 – Sep 2026
social.plus (B2B SaaS, in-app community platform) — *Bangkok, Thailand*

- Automated Kinesis shard scaling on staging (live since Jul 2026) with an autoscaler built from CloudWatch alarms, EventBridge and a Python Lambda in Terraform, with cooldowns, a ceiling and dry-run mode
- Proved it under 6.5M records of load ($1 \rightarrow 2 \rightarrow 4 \rightarrow 2 \rightarrow 1$ shards) and stopped phantom scale-ups by showing idle streams stop publishing metrics, then adding a freshness check
- Built Grafana dashboards and alerts for 8 Kinesis streams via Argo CD, and used them to verify every scaling step
- Replaced branch-per-environment Terraform for a billing data pipeline with one trunk across 5 environments and a matrix GitHub Actions workflow, with zero changes to live resources
- Corrected an EMQX (MQTT) design on 9 points via a read-only audit of 2 AWS accounts, then brought the staging fleet under Terraform with zero changes to live servers
- Prevented duplicate prod resources by catching a CI gap in an OpenSearch import, and uncovered 25 months of silently failing prod snapshots
- Wrote or co-wrote 10 specs (npm OIDC publishing, EKS DNS caching, MongoDB migration); merged 20 PRs

Backend & Infrastructure Developer (Freelance) — Dec 2025 – Mar 2026
MyChatterBox, mentor booking platform — *Remote*

- Owned the NestJS backend (50 endpoints, Stripe webhooks, BullMQ jobs) and its Docker builds to GHCR

Projects

Self-hosted Kubernetes Platform | k3s, Argo CD, Helm, Terraform, Prometheus, Tempo — 2026 – Present

- Run 30+ Argo CD applications on k3s (Oracle Cloud ARM) from 3 GitOps repos, with SealedSecrets and Prometheus, Loki and Tempo alerting to Discord
- Closed a Cloudflare Access bypass on all 15 hostnames with an in-cluster tunnel and iptables drops, after showing an IP allowlist fails because kube-proxy rewrites client IPs
- Fixed silently dropped DNS for 10+ VPN users by patching the Outline server (Go) with regression tests

Unishare | NestJS, PostgreSQL, pgvector, Docker, GitHub Actions — Feb 2026 – Present

- Lead developer of an open-source notes platform for 40–50 students, with OIDC single sign-on for 3 apps
- Made failed database migrations block a rollout: CI commits image tags to Git and Argo CD syncs in waves

Awards & Community

1st Runner-up, SIT IoT Hackathon 2026 | **2nd Runner-up (National)**, Hack Hed Dee Hackathon — 2025 – 2026

Volunteer: FOSSASIA Summit 2026 technical support, Thate Pan Hub science classes — 2025 – Present

Skills

Cloud & IaC: AWS (Kinesis, Lambda, EventBridge, CloudWatch, EKS, S3, OpenSearch, IAM), Terraform
Containers & CI/CD: Kubernetes (EKS, k3s), Helm, Argo CD, Docker, GitHub Actions
Observability: Prometheus, Grafana, Alertmanager, Loki, Tempo, OpenTelemetry
Languages: Python, Go, Bash, TypeScript, SQL
